

Nancy McMoneagle Retires

March 4th marked my retirement as the Institute's President & Executive Director, a position that has been a great honor and pleasure for me to fill these past five years. I leave TMI under the excellent leadership of our new President & Executive Director, Scott Taylor, EdD.

As Bob used to say to program participants after they had gained the various tools from Gateway and other programs, "It's up to you now—go find out for yourself!" So, in parting, I'd also like to say, as you continue your journey of exploration—It's up to you now—*Explore, expand, experience, and have fun!*

Thank you for a wonderful experience!

Scott Taylor Announced as President & Executive Director

The Monroe Institute (TMI) welcomes Scott Taylor as President & Executive Director. He brings to the Institute a wealth of experience in business, nonprofits, adult education, and research.

Over the last two decades, he mentored thousands of small business owners and nonprofit executives as part of the small business management faculty with Minnesota State Colleges and Universities. Early in his career, Scott led the 17-branch Brett's Department Store and served as marketing VP for a startup bio-tech manufacturer. He also founded and led the Minnesota-based Expanded Awareness Institute.

Copper Wall Installed at RMR

News from TMI's Research Division

The Millennium Room at Roberts Mountain Retreat (RMR) is the lab with the pyramid roof that's connected to the log cabin where Robert Monroe once engaged in out-of-body explorations. If you have done a PREP session at RMR, you have been in the booth in the Millennium Room. [Read More about the Copper Wall Here.](#)

In other research news, Dr. Ross Dunseath has completed a pilot 21-channel EEG evoked potential study comparing brain responses from binaural beats and SAM, which showed there is a driving effect from SAM that is similar to but different from binaural beats. This study will be expanded to 32-channel EEG thanks to a grant from AMG Charitable Gift Foundation, for better detail in brain activity mapping.

Research Opportunity at TMI

The Division of Perceptual Studies (DOPS), at the University of Virginia, and The Monroe Institute (TMI) are collaborating on research that includes studies of extraordinary and potentially novel psychophysiological skills. Some of this work could be relevant for progress in understanding healing and subtle energy, including efforts to replicate and extend previously published research reporting unusual body electric fields in some healers and meditators.

We are seeking a Research Specialist with at least a master's degree for a two-year position that will involve conducting several studies at TMI where there is a large base of available participants attending programs in consciousness exploration. The job requires a balance of scientific skills with an understanding of the psychological needs of program participants. For more info:
